

Run In Guide for Yamaha KT100S

Downloaded from www.kartmart.com.au

Follow this guide in a 20 minute session.

First 10 minutes:

Set the carby on race settings: Low Jet $1^{1/2}$ approx.
High Jet $1^{1/3}$ approx.

Using full throttle, rev the engine 3000rpm to 10000rpm. Then brake to slow down to 3000rpm. Repeat this for the session.

Second 10 minutes:

Set the carby on rich settings: Low Jet $1^{1/3}$ approx.
High Jet $2^{2/3}$ approx.

4 stroke the engine to approximately 13000rpm. Then every lap after that reduce the 4 stroke over the 10 minute session. Reduce the 4 stroke using the high jet with $1^{1/8}$ turns until just off the 4 stroke.

This is only a guide. If you are finding your engine does not want to run to these settings (ie fouling plugs), please contact us on (08) 9358 5800 or email kartmart@kartmart.com.au
